

Hosting Providers

The business organization upon having the application developed by a team, inorder to host the application and make it accessible to the customers around the world to offer their services they need infrastructure, software and human resources to maintain. If they go for in-house hosting the cost and maintainance is high

So as an alternate hosting providers comes into picture.

hosting providers

```
java application
|-infrastructure
|-network (internet)
|-powersupply
-----
1. operating system
2. java programming language 17/11
3. web server/application server
   |-tomcat10
```

```
#2 java
#3 php
#5 python
```
